HEALTH SCIENCES UNIVERSITY

SAMSUN EDUCATION and RESEARCH HOSPITAL

SBU Samsun Education and Research Hospital provides services on 63.000 m2 total area with spacious and comfortable patient rooms, large living areas, and its modern building.

SBU Samsun Education and Research Hospital, one of the banner-bearing health facilities of our country, presents quality and accessible health service to all our patients with 277 Physicians, 910 health personnel, 700 registered beds (605 service beds and 95 intensive care beds), 17 operation rooms, and improved imaging and treatment devices (PET CT, CyberKnife, BT, MR etc.).

Being one of the 20 provinces that the Ministry of Health aims to brand in health services, Samsun is one of the tourism destinations that attract attentions of the people of the entire world thanks to its historical and cultural infrastructure, its nature where blue and green meet, and its numerous accommodation facilities certificated by the Ministry of Tourism.

ONCOLOGY SERVICES

REPUBLIC OF TURKEY MINISTRY OF HEALTH
SAMSUN PROVINCIAL DIRECTORATE OF HEALTH

At our comprehensive Oncology Center, Radiation Oncology, Medical and Surgery Oncology Treatments are being provided.

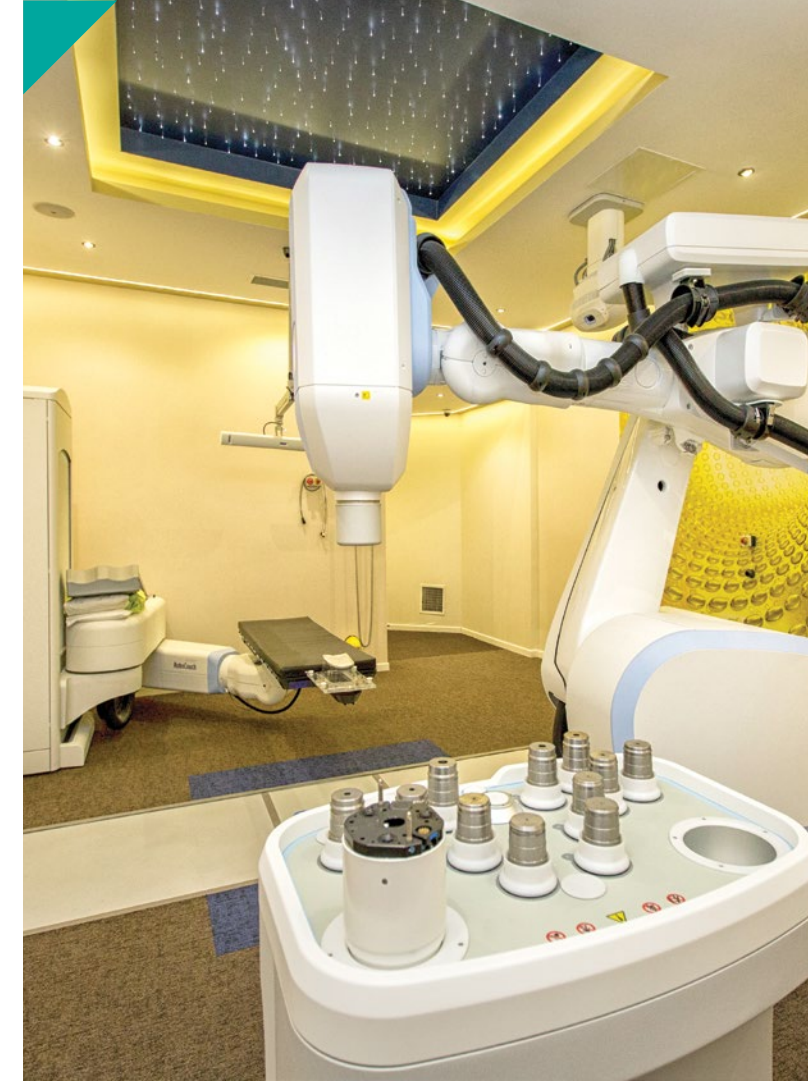

Our center situated only in eight provinces of us in Turkey has been providing services for 15 years with its experienced staff consisting of an Associate Professor and 10 Specialist Physicians.

In our center where the medications are prepared in a special sterile room with an automated system by our experienced health personnel, 43-bed daily chemotherapy unity and 93-bed oncology clinic are present.

In our center that provides polyclinic services to 55,683 patients and 10,957-session chemotherapy services to 5,172 patients annually, superior-level oncology examination and treatment devices, such as PET CT, CyberKnife, Gama Camera, and LINAC, are available.

CYBERKNIFE Cancer Treatment

TUMOR TREATMENT WITHOUT BLOOD and PAIN

CyberKnife, the radio-surgery system that applies radiation only to the area with tumor and treats it without posing damage on the healthy tissues around the tumor, provides services at our Oncology Unit.

The device that allows the completion of the entire treatment in a shorter period (1-5 days) compared to the classical radiotherapy, is the radio-surgery system with the utmost-level technology utilized today.

With our device that is available in the Public Hospitals of only four provinces, annually, 8,068 sessions and 22,749 transactions are conducted.

CARDIOLOGY CLINIC

REPUBLIC OF TURKEY MINISTRY OF HEALTH
SAMSUN PROVINCIAL DIRECTORATE OF HEALTH

At our Cardiology Clinic that consists of two Associate Professors and 10 Specialist Physicians and that examined 48,984 patients in 2016, over 6,000 transactions are conducted on annual basis.

Within our clinic, an Angio Unit with 27-bed service, 10-bed Coroner Intensive Care Unit, 2 angiography devices, and resting rooms after angiography is available.

Medical responses performed:

- Transcatheter Aorta Valve Implantation (TAVI),
- Mitral Valve Balloon Valvuloplasty,
- Karotis and Peripheral Artery Stent,
- Renal Artery Stent,
- Diagnosis and Treatment with Electro Physiological Work in Arrhythmias,
- Closing the Holes on Hearts with the Non-surgery Method,
- Endarterectomy of the Cardiac Veins with Long-term Occlusion without Surgical Operation,
- Coroner Balloon Angio plasty and Stenting ,
- Peripheral Angiography and Stenting,
- Implantation of Temporary and Permanent Pace-makers.

CARDIOVASCULAR SURGERY SERVICES

REPUBLIC OF TURKEY MINISTRY OF HEALTH
SAMSUN PROVINCIAL DIRECTORATE OF HEALTH

YOUR HEART IS IN GOOD HANDS

In our Cardiovascular Surgery Clinic with 12 Specialist Physicians, where 25,155 patients were examined in 2016, about 4900 transactions are conducted annually.

In our clinic, there is a 25-bed service and 5-bed KVC Intensive Care Unit.

ROBOTIC

Walking Device

Robotic Walking Device is an electromechanical walking system that presents the standard walking pattern automatically to the patients whose walking ability has been deteriorated due to various reasons.

The illnesses of its use:

- Brain and spinal cord injuries,
- Stroke,
- Multiple Sclerosis (MS)
- Cerebral Palsy
- Spina Bifida
- Parkinson
- Walking disorders due to neurological or orthopedic reasons

Avantajları:

- Generally, robotic technologies may render the neuroplasticity studies more efficient by improving movement quality and increasing the repetition and intensity of tasks.
- It is very important for the patient to remain standing for the accurate function of the internal organs. It ensures that the metabolic inconveniences that might emerge in the bed-dependent patients are prevented.
- It is very beneficial especially for the health of the heart and veins.
- It is impossible to make the patient walk with a rhythmic and accurate walking pattern in a safe manner using the conventional treatment methods. However, thanks to the robotic walking robot, even the patients with obesity can walk without difficulty safely and with the true walking pattern.

Health in **SAMSUN** Heart of Tourism

CHILDREN Rehabilitation Center

The illness groups for which we provide treatment service in our pediatrics rehabilitation unit are:

SAMSUN

Amisos, its former name...

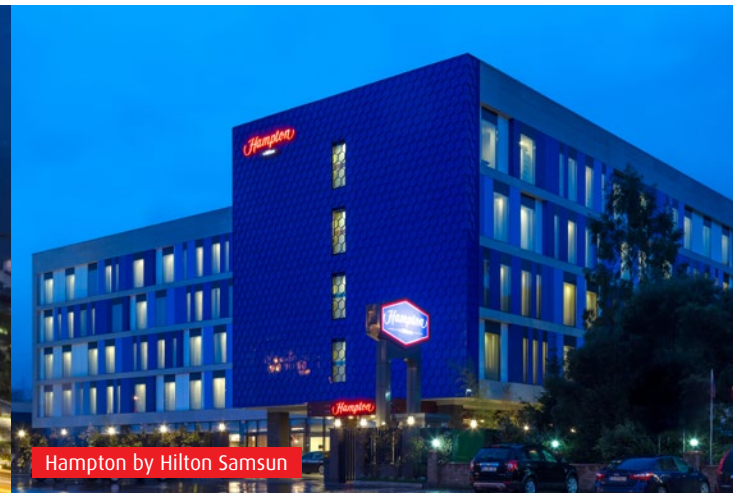

The province of Samsun is a significant settlement having hosted numerous civilizations in the Black Sea Region with 6,000- year history. It provides opportunity for all kinds of tourism with its 200-km coastline, natural beaches, many protected areas and registered structures, archeological and ethnographic works exhibited at the museum, State Opera and Ballet, State Theatre, art galleries with events in any season of the year, meeting halls for congress tourism, hundreds of kinds of endemic plants, plateaus, mountains, forests, paragliding areas, skiing, and grass skiing areas, birds paradise, lakes and waterfalls.

- Areas with Potential for the Development of New Tourism Types**
- Cruise Tourism
 - Eco Agriculture Tourism
 - Airpark (Civil Aviation Tourism)
 - Winter Tourism (Ski, Skiboard, Snow Trekking, Tour Ski, Ice-skating, Sledge)
 - Health Tourism
 - Hunting Tourism
 - Water Sports (Swimming, Canoe, Line Fishing, Sailing, Boat Tour, Windsurf, Water-ski, Rafting, Diving)
 - Congress Tourism
 - Riding
 - Paragliding

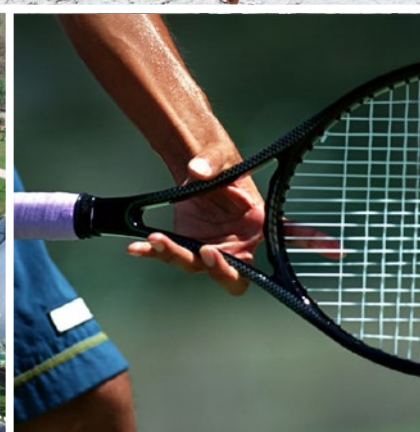

Sheraton Grand Samsun Hotel

Hampton by Hilton Samsun

Despite the little share of tourism in Samsun's economy, there are many historical and touristic places to see in the districts and villages as in the center. It is possible to conduct water sports in Ayvacık, winter sports in Ladik, hot spring tourism in Havza, and culture tourism in Vezirköprü. Along with benefiting from the sea and sand in summer, hunting tourism is available in winter.

Samsun is a part of the DOKAP project implemented in eight provinces aiming to meet the basic infrastructure need in the Eastern Black Sea Region and accelerate the economic and social development in the region. The green road route in the scope of the project crosses the Salıpazarı, Ayvacık, and Ladik plateaus and terminates at the district of 19 Mayıs around the Kızılırmak Bird Paradise Delta.
